1 Fall 2018

1.1 Remove the margins of `.eps` files

We first install a command line tool `epstool` using `Homebrew`

```
brew update
brew install epstool
```

Next we use the following command to remove the margins and generate a `.pdf` file

```
epstool --copy --bbox input_file.eps input_file_temp.eps
epstopdf --hires --outfile=output.pdf input_file_temp.eps
rm input_file_temp.eps
```

Enjoy it.
